

Soumyasree Ghosh Roy Chowdhury

AI | Gen AI Analyst

[LinkedIn](#) | Email: soumyasreeg26@gmail.com

PROFESSIONAL SUMMARY

Detail oriented AI and Generative AI Analyst with more than two years of experience in AI model evaluation, data annotation, quality auditing, Responsible AI review, and incident escalation. Experienced in validating conversational AI outputs, identifying hallucinations, safety concerns, bias, logical failures, and recurring quality issues. Skilled in creating golden responses, reviewing ambiguous cases requiring human judgment, documenting findings, and using ServiceNow for incident management and escalation. Proven ability to exceed quality and productivity targets, mentor new team members, and support the improvement of AI products across global technology projects.

EXPERIENCE

Generative AI Analyst | iMerit Technology Services (imerit.net) | Remote

Project: Liha (LinkedIn Hiring Agent)

March 2025 – Present

- **Model Evaluation, Quality Auditing and Improvement**

- Evaluate AI generated learning outcomes based on recruiter feedback, assessing how accurately the model interprets hiring intent, candidate qualifications, and recruiter preferences.
- Review model outputs using a structured three point quality scale, identifying inaccurate reasoning, weak recommendations, contextual gaps, and inconsistencies.
- Create corrective data and golden responses for inaccurate model outputs, providing reliable reference data for model improvement.
- Analyse recurring error patterns and compare recruiter feedback with subsequent model behaviour to identify systematic failures and improvement opportunities.
- Review ambiguous cases that require human judgment and escalate significant quality or safety concerns according to project guidelines.

- **Conversational AI Quality Assurance and Responsible AI Review**

- Audit multi turn conversations between the Liha screening agent and candidates, evaluating whether the agent follows the expected interview flow and competency questions.
- Assess AI responses across hallucination, logical progression, coherence, relevance, style, and user experience.
- Monitor Responsible AI compliance by identifying potential safety concerns, bias, autonomy issues, inappropriate responses, and policy deviations.
- Identify duplicate questions, contextual errors, conversation breakdowns, and edge cases that could affect candidate experience or model reliability.
- Categorise findings by issue type and impact, document review outcomes, and prepare concise quality observations for project stakeholders.
- Use ServiceNow to create and track escalation tickets, document incidents, provide issue summaries, and support follow up until resolution.

Project: ANGO HUB - CoreLogic – Building & Geospatial Intelligence
July 2024 – February 2025

- Completed advanced annotation and quality review workflows using satellite, drone, and oblique imagery to support AI model training for property intelligence and geospatial analysis.
 - Drawing Segmentation: Created accurate polygons around buildings for object localisation and segmentation.
 - Foundation Batch: Identified and categorised building foundation types using drone imagery.
 - Vent Types: Identified and classified roof vents according to project guidelines.
 - Vegetation Labelling: Distinguished between live and dead vegetation for environmental and property mapping.
 - Oblique Imagery: Annotated building materials, amenities, vents, vegetation, and structural features using angled imagery.
- Applied detailed SOPs and quality standards to maintain annotation accuracy while consistently meeting or exceeding daily productivity targets.
- Identified unclear cases, annotation discrepancies, and edge conditions, escalating them for review where human judgment or additional guidance was required.
- Supported AI systems in accurately identifying and classifying diverse building structures and property features.
- Conducted onboarding sessions and mentored new team members on annotation guidelines, quality expectations, tools, and workflow best practices.
- Shared project observations and recurring quality issues to support process improvement and reviewer consistency.

AI Data Analyst | iMerit Technology Services (imerit.net) | Remote
Project: APPEN - LinkedIn AI Tool (COACH)
March 2024 – June 2024

- Analysed LinkedIn job postings across global markets to improve training data quality for COACH, an AI based job search tool.
- Evaluated and rated job postings using a standard four point scale, ensuring consistent and reliable data during the product testing phase.
- Reviewed job content for relevance, clarity, completeness, and alignment with project requirements.
- Identified unusual cases, inconsistencies, and possible quality issues requiring further review.
- Collaborated with cross functional teams to improve annotation processes and support the product's readiness for release.
- Completed structured training in Generative AI, AI and machine learning workflows, quality evaluation, and ethical data handling.

SKILLS

- **AI Model Evaluation:** Generative AI output evaluation, conversational AI review, model behaviour analysis, golden response creation, and human review of AI decisions.
- **Responsible AI and Safety:** Hallucination detection, bias identification, safety review, autonomy issue detection, policy compliance auditing, and edge case analysis.
- **Data Annotation and Quality Auditing:** Golden dataset support, image annotation, segmentation, classification, quality control, error analysis, and guideline based review.
- **Incident Management:** ServiceNow ticket creation, incident documentation, escalation support, issue categorisation, status tracking, and concise incident summaries.
- **Analysis and Reporting:** Pattern identification, recurring issue analysis, quality observations, audit findings, root cause hypotheses, and stakeholder updates.
- **Process Improvement:** Workflow optimisation, guideline clarification, reviewer calibration support, onboarding assistance, and sharing of operational best practices.
- **Training and Mentoring:** New joiner onboarding, peer guidance, quality coaching, and knowledge sharing.
- **Domain Knowledge:** HR technology, talent acquisition automation, conversational AI, job market analytics, property intelligence, geospatial data, and international AI data standards.

TECHNOLOGIES AND TOOLS

- Liha, LinkedIn Hiring Agent
- ServiceNow
- APPEN COACH, AI job search workflow
- ANGO HUB and CoreLogic AI workflows
- Data annotation platforms
- Image segmentation and classification tools
- Generative AI evaluation tools
- Microsoft Office Suite

EDUCATION

Master of Arts in English
University of Calcutta, College Street Campus

ACHIEVEMENTS

- Consistently exceeded daily quality and productivity targets across LinkedIn and CoreLogic projects.
- Delivered onboarding and training sessions for new team members, supporting consistent understanding of project guidelines and quality standards.
- Contributed corrective data and golden responses to improve the performance of a Generative AI hiring agent.
- Supported AI products designed for global employment, candidate screening, property intelligence, and geospatial analysis.
- Received books and a certificate for securing the highest marks in the English department during Bachelor of Arts Honours.
- Received books for securing the highest marks in English in the Madhyamik examination.
- Participated in and received prizes in multiple dance competitions.
